# 1.1. Content management

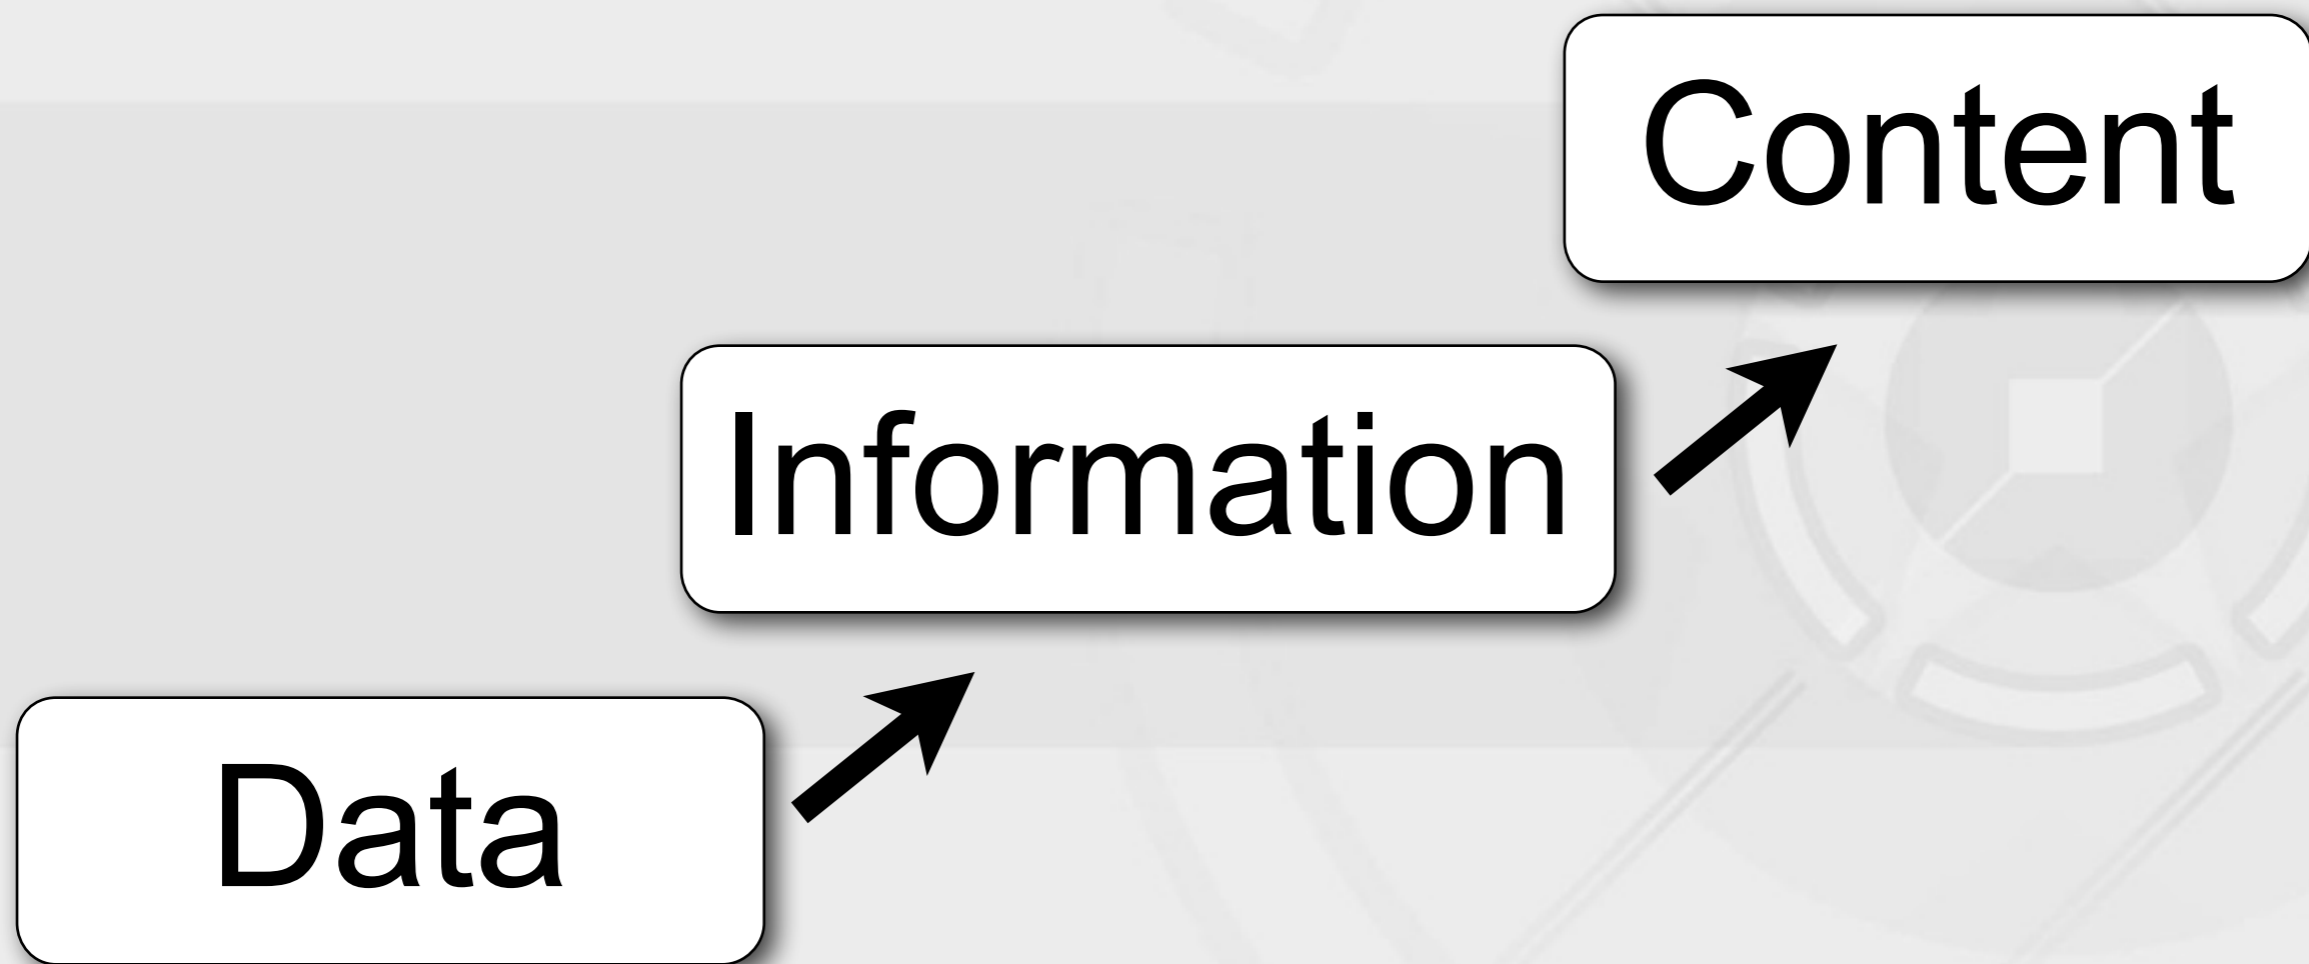

**Content ?**

# Content

# Content Management

- Information
  - creation, representation and exchanging
- Information media (信息载体, 石刻, 竹简, 羊皮纸, 雕塑, 建筑 ...)
  - collection, organization and storage
- 古老的行业

# Content Management

- Examples:
  - Ancient years: Literature in Libraries and Archives (档案馆)
  - From 19th century: Continuous Media (连续媒体), movie, audio ...
  - After 1980's: Digital Media (数字媒体), digitalized  
~

# Content Management

# Content Management

- process, store and transfer (data) content

# Content Management

- process, store and transfer (data) content
- Key: non-linear creation

# Content Management

- process, store and transfer (data) content
- Key: non-linear creation

# Content Management

- process, store and transfer (data) content
- Key: non-linear creation
- Media industry:  
**fusion** between traditional company (news paper, broad casting, entertainment) and modern company (google, sina, apple, facebook)

# Content Management

- process, store and transfer (data) content
- Key: non-linear creation
- Media industry:  
fusion between traditional company (news paper, broad casting, entertainment) and modern company (google, sina, apple, facebook)
- Non-Media industry:  
data and documents in big companies, education units, research units, museums

# 信息的银行？

- 保险柜？
- 交易平台？
- 。。。？

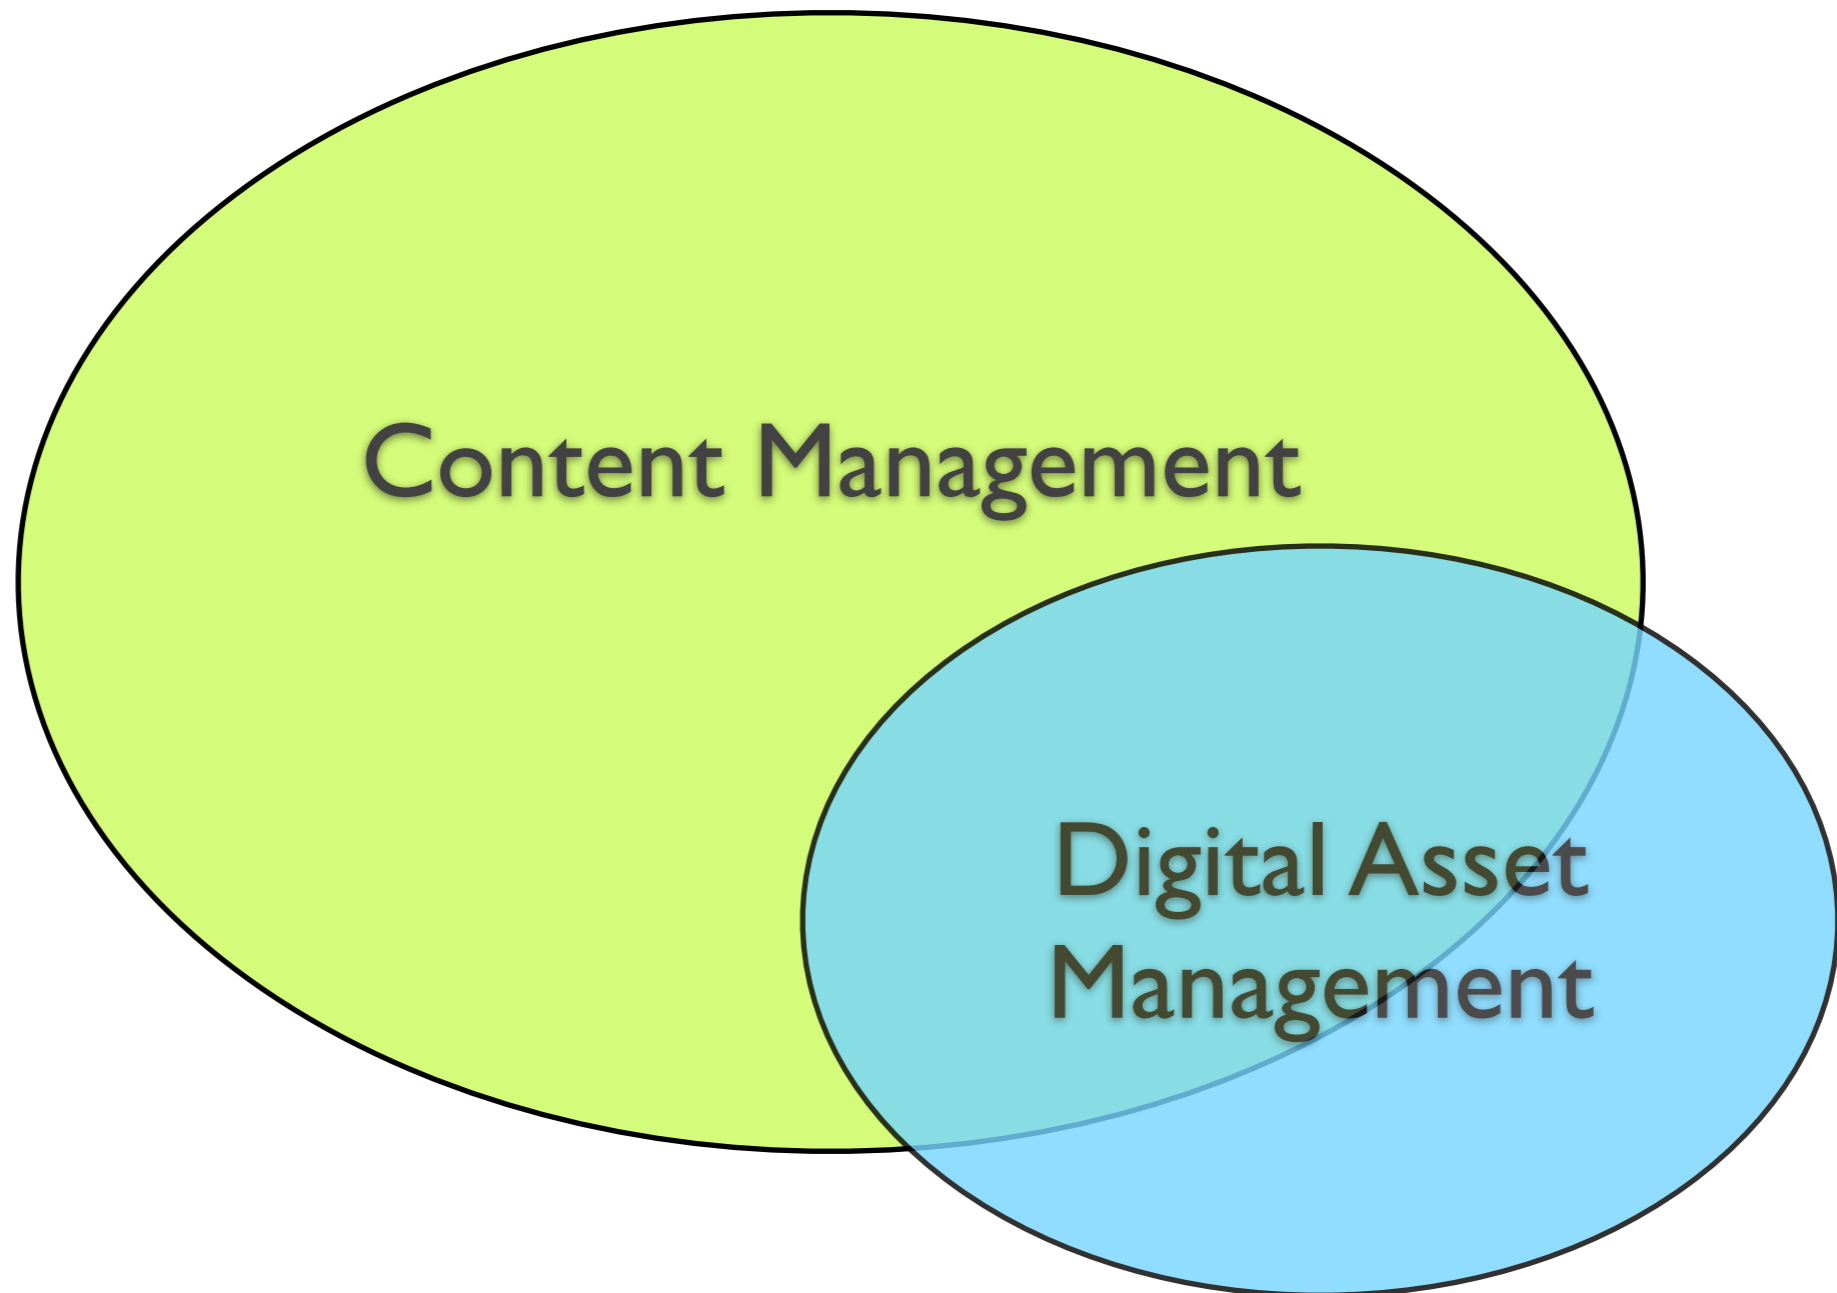

# Typical CMS

- Website of a research unit
- Personal blog
- Wiki

# Digital Asset Management

# What is Digital Asset Management?

- Tools for organizing, storing and retrieving content in digital format
- downloading, renaming, backing up, rating, grouping, archiving, optimizing, maintaining, thinning, and exporting ...
- Includes:
  - text, video, images, movies, sound, and 3D content

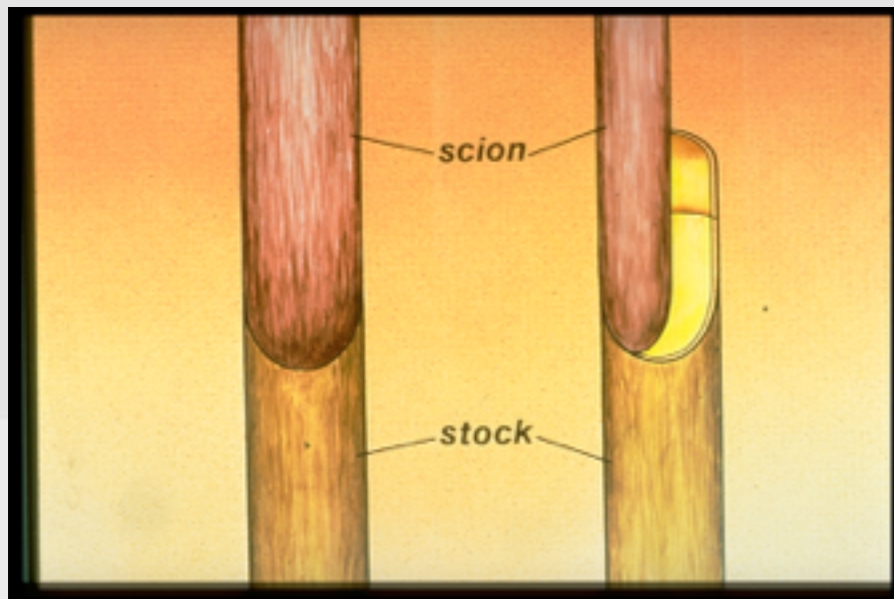

# Content Management and DAM

- **“It’s just another binary file type”** is a superficial response
  - But so is, **“It’s just managing brand assets”**
  - Digital Asset Management involves
    - Much higher **storage volumes**
    - More complex **ownership** and **usage rights**
    - More **complex content** (layers)
  - However, an organization needs a **unified content management/digital asset management strategy** to avoid unnecessary costs in hardware, licensing, software development and support

### Layering

Technique by which adventitious roots are caused to form on a stem while it is still attached to the parent plant. It is then detached to become a new plant.

#### Factors affecting layering

1. Nutrition - still connected to parent plant. In some respects is similar to grafting - get accumulation of CHO etc at point of budding.
2. Stress avoidance - Is not detached from parent plant. Better water relations. Less leaf senescence and leaching on plants that take long time to root.
3. Light exclusion - similar to blanching in tip layering. Is stimulation in trench layering.

#### Main uses of layering

1. For plants that propagate this way naturally such as raspberries, blackberries.
2. Plants which are difficult to propagate other ways - such as cuttings but which are valuable enough to do this since it is a labor-intensive method. Mignon - air layering, filberts - simple layering, muscadine grapes - compound layering.
3. For producing a large sized plant in a relatively short time. For many foliage plants.
4. For production when there are minimum propagation facilities.

#### Types of layering

1. **Tip layering** - In late summer starts to happen naturally. Tip changes appearance. Elongated with small curved leaves. They die and shoot tip recovers upward to produce a sharp bend in stem from which roots develop.

## Text

### Nutrient Media

#### Nutrient Media

Nutrient media for plant tissue culture are designed to enable explants to grow in a totally artificial environment. In order to enable plants to grow in vitro, scientists have devised nutrient media that provide the nutrients usually available in soil. In addition to mineral elements which make up the macro- and micronutrients present in fertilizers, nutrient media also contain organic compounds such as vitamins, plant growth regulators, and a carbon source.

#### Mineral elements

One of the most successful media, devised by Murashige and Skoog (Murashige and Skoog, 1962) was formulated by analyzing the inorganic components in tobacco plants and then adding them to media in amounts similar to those found in the plants. Not only did they find that the ions themselves were important, but the form in which the ions were supplied were critical as well.

#### Macronutrients

Macronutrients consist of N, K, P, Ca, Mg, and S.

**Nitrogen (N)** - Nitrogen is required for general growth and is essential to plant life. Most inorganic nitrogen is converted to amino acids and then to proteins. The two most widely used forms of inorganic nitrogen used in plant nutrient media are the nitrate ion ( $\text{NO}_3^-$  - oxidized) and the ammonium ion ( $\text{NH}_4^+$  - reduced) which are added as inorganic salts. Nitrate is usually added at concentrations between 25 and 40  $\mu\text{M}$  and ammonium between 2 and 20  $\mu\text{M}$ . In poorly buffered media, use of both forms helps maintain pH. Many plants appear to grow best if given both forms, although the reason for this is not known. In devising media, both the total amount of nitrogen as well as the relative amounts of  $\text{NO}_3^-$  and  $\text{NH}_4^+$  are important. When the ammonium ion is used alone it may be toxic. Inorganic nitrogen generally ranges from 25-60 mM in nutrient media. Nitrogen may also be added in an organic form as amino acids, hydrolysates (such as casein hydrolysate) and organic acids.

The organic forms of nitrogen such as amino acids are often useful when added to media that do not contain ammonium. One advantage of using organic nitrogen is that it is already reduced, the form in which most nitrogen enters the plant and thus may be taken up more readily than inorganic nitrogen. Organic forms of nitrogen cannot, however, totally replace inorganic forms. One danger of using amino acids is that here TOO MUCH can be added in which case feedback inhibition can occur. Biochemically the cells sense that there is a great deal of a specific amino acid and consequently change the metabolic pathways to stop the natural production of the amino acid. This results in the production (or backing up) of intermediate compounds which in turn may disrupt normal metabolism.

The form of nitrogen is often critical depending on the kind of culture. There is a difference in the oxidized and reduced forms. The two main forms of nitrogen used are ammonium  $\text{NH}_4^+$  and nitrate  $\text{NO}_3^-$ . The form of nitrogen affects the pH. When both forms of N are used there is a rapid uptake of ammonium (the more readily available form since it is reduced) which results in a decrease in pH to about 4.4. At lower pH the uptake of nitrate is preferred and thus the pH rises. Nitrate is used in addition to ammonium because the ammonium ion in excess is usually toxic. Also pH would be much more difficult to control with just ammonium.

- Select images for an electronic gallery - specific lecture topics

# What Can DAM Do for You ?

- Catalog large numbers of formats
- Create a visual category using thumbnails
- Add keywords, data fields
- All fields can be searched
- Select images for an electronic gallery - specific lecture topics
- Share over the internet

# DAM Example: Picasa

Photo Management: Client Software + Web Service

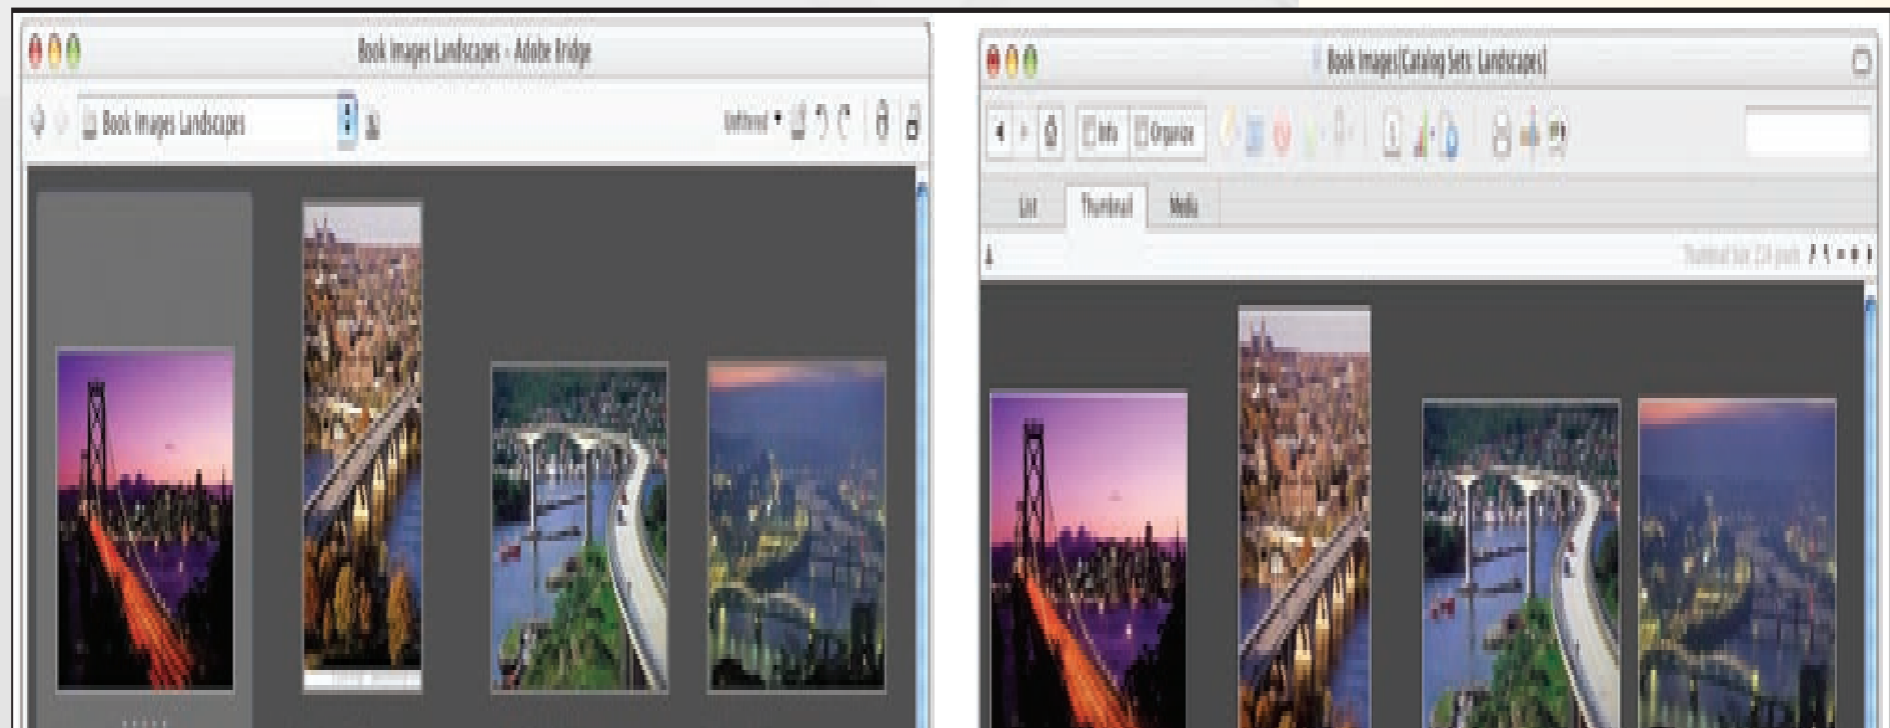

# Rules of sound DAM

- Systematize
- Don't rely on your memory
- Be comprehensive
- Build for the future
- Do it once...
- But don't overdo it

# Browsers v.s. cataloging

- DAM faster
- allows user to have virtual sets.
- knows where stuff is supposed to be.
- allows faster backup of important sorting work.
- allows you to work with offline images.

# Browsers v.s. cataloging

- Browsers:
  - Photoshop Bridge
- Cataloging software
  - Google Picasa
  - ACDSee

## 1.2. Industrial Analysis

# DAM: Past and Present

- Digital Asset Management initially established **Niche Markets**, including
  - Publishing, Media and Entertainment
  - Broadcasting – Media Asset Management
  - etc.

# DAM: Past and Present

- Now on the Verge of **Going Mainstream**
- Integration into
  - Enterprise Content Management and
  - Document Management Strategies
- Cross Industry
  - Financial Services, Pharmaceuticals, Consumer Packaged Goods, etc.
- Mainstream Vendors

# DAM: Past and Present

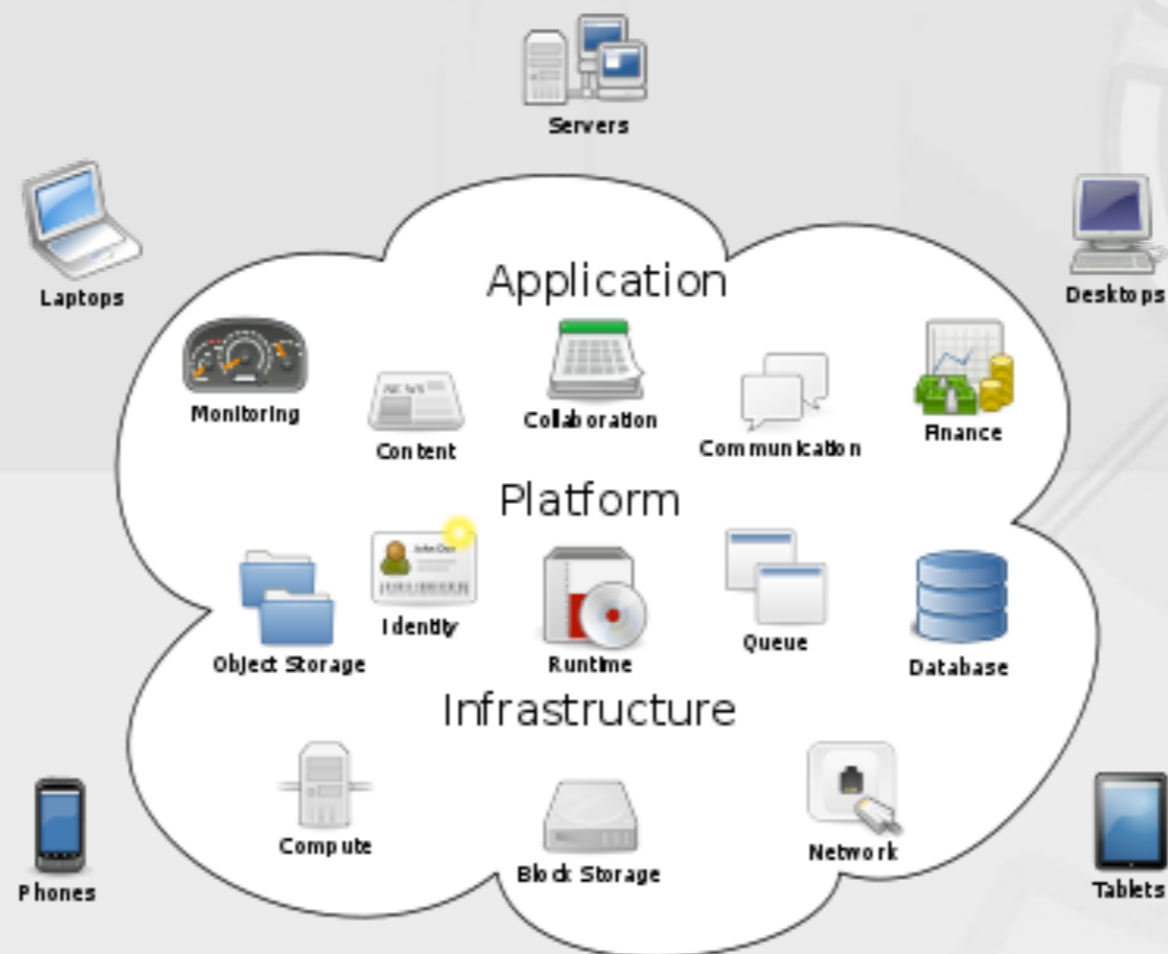

- 淘宝电子书 <http://ebook.taobao.com/>

The screenshot shows the homepage of Taobao E-books. At the top left is the logo '淘宝电子书 ebook.taobao.com'. To the right is a search bar with the text '明朝那些事儿' and a '搜索' button. Below the logo is a navigation bar with links: '首页', '主题馆', '免费读书', '女性生活', '财经励志', '小说人文', '网络原创', '客户端下载', '电子书购物车', '我的书架', and '储值卡'. A secondary navigation bar lists popular e-books: '热门电子书: 暴瘦 朱元璋 发财 瘦身瑜伽 毕淑敏 两性 孩子培养 养生 后宫甄嬛传 唐七公子 穿越 我家小孩有点倔 英语 卖家秘籍'. A yellow banner reads '指尖上的阅读 给你好看' with icons for various devices. The main content area features a large advertisement for '淘宝读书' (Taobao Reading) with the headline '亲,你久等了!' and 'For iPhone/iPad 客户端发布了'. Below this are several promotional tiles: '5折让利', '9.12 示爱节', '少年 天天向上', '梅子黄时雨 白落梅 庄雅婷', and '胆小慎入'. On the left side, there is a '电子书分类' (E-book Categories) section with sub-sections: '生活时尚' (Lifestyle & Fashion), '母婴育儿' (Mother & Child), '养生保健' (Health & Wellness), and '职场励志' (Career Inspiration). On the right side, there is a '淘书' (Browse Books) section with a list of categories: '逛书', '女性生活', '小说人文', '财经励志', '网络原创', and 'TOP ↑'. Below this is a '淘书' (Browse Books) section with icons for '苹果设备' (Apple devices), '安卓' (Android), and 'PC客户端' (PC client). At the bottom right, there is a '储值卡' (Virtual Card) section with a '充值' (Recharge) button and a '支付宝' (Alipay) logo.

# Digital Asset Management – Case Study

# Case Study #1: Music Publishing

- Apple (iTunes)
- Leading music publishing firm
  - own millions song copyrights and supports 100 countries and territories
- Client needed a means to further maximize and manage the value of the song copyrights that it owns through promotion, licensing and royalty processing
- Client decided to turn all their internal processes and data outward, making them available to business partners and associates everywhere, at all time

# Case Study #1: Music Publishing

- Key technical aspect was integration of numerous IT systems including several territorial:
  - databases, search, application server/portal
  - not just simply a packaged DAM system deployment
- Outcome was the world's largest digital rights management (**DRM**) system

# Case Study #1: Music Publishing

- Apple's iTunes (data 2011)
  - > 8,500,000,000 music sale
  - > 84,000,000 iPad
  - > 13,000,000 iPhone
  - > 350,000,000 iPod
  - > 400,000,000 iOS devices
  - > 435,000,000 iTunes users

# Case Study #2: Cable Television

- Leading cable television network: multiple premium channels/multiple multiplex channels
- Client needed more effective means to provide affiliates access to digital assets: marketing materials, programming information, ads, etc.
- Client also needed ability to request print materials and to order services (e-commerce transactional back-end integration)
- Client required a single 3rd party system integrator that could:
  - Span technologies: Digital Asset Management, Content Management, Application Server, Portal
  - Span core competencies: Creative Design, Back-end Integration, etc.
  - Take over where a previous 3rd party systems integrator left off

# Case Study #2: Cable Television

- Google TV: Android based
- Apple TV? IOS based ...

# Case Study #3: A Digital Asset Management System at **University of Michigan**?

- Create a robust infrastructure to ingest, manage, store and publish digital rich-media (富媒体) assets and their associated metadata.
- Streamline the “workflow” required to create new works with digital rich-media assets.
- Build an environment where assets are easily searched, shared, edited and repurposed in the academic model.
- Provide a campus-wide platform for future application of rights declaration techniques (or other IP tools) to existing assets.

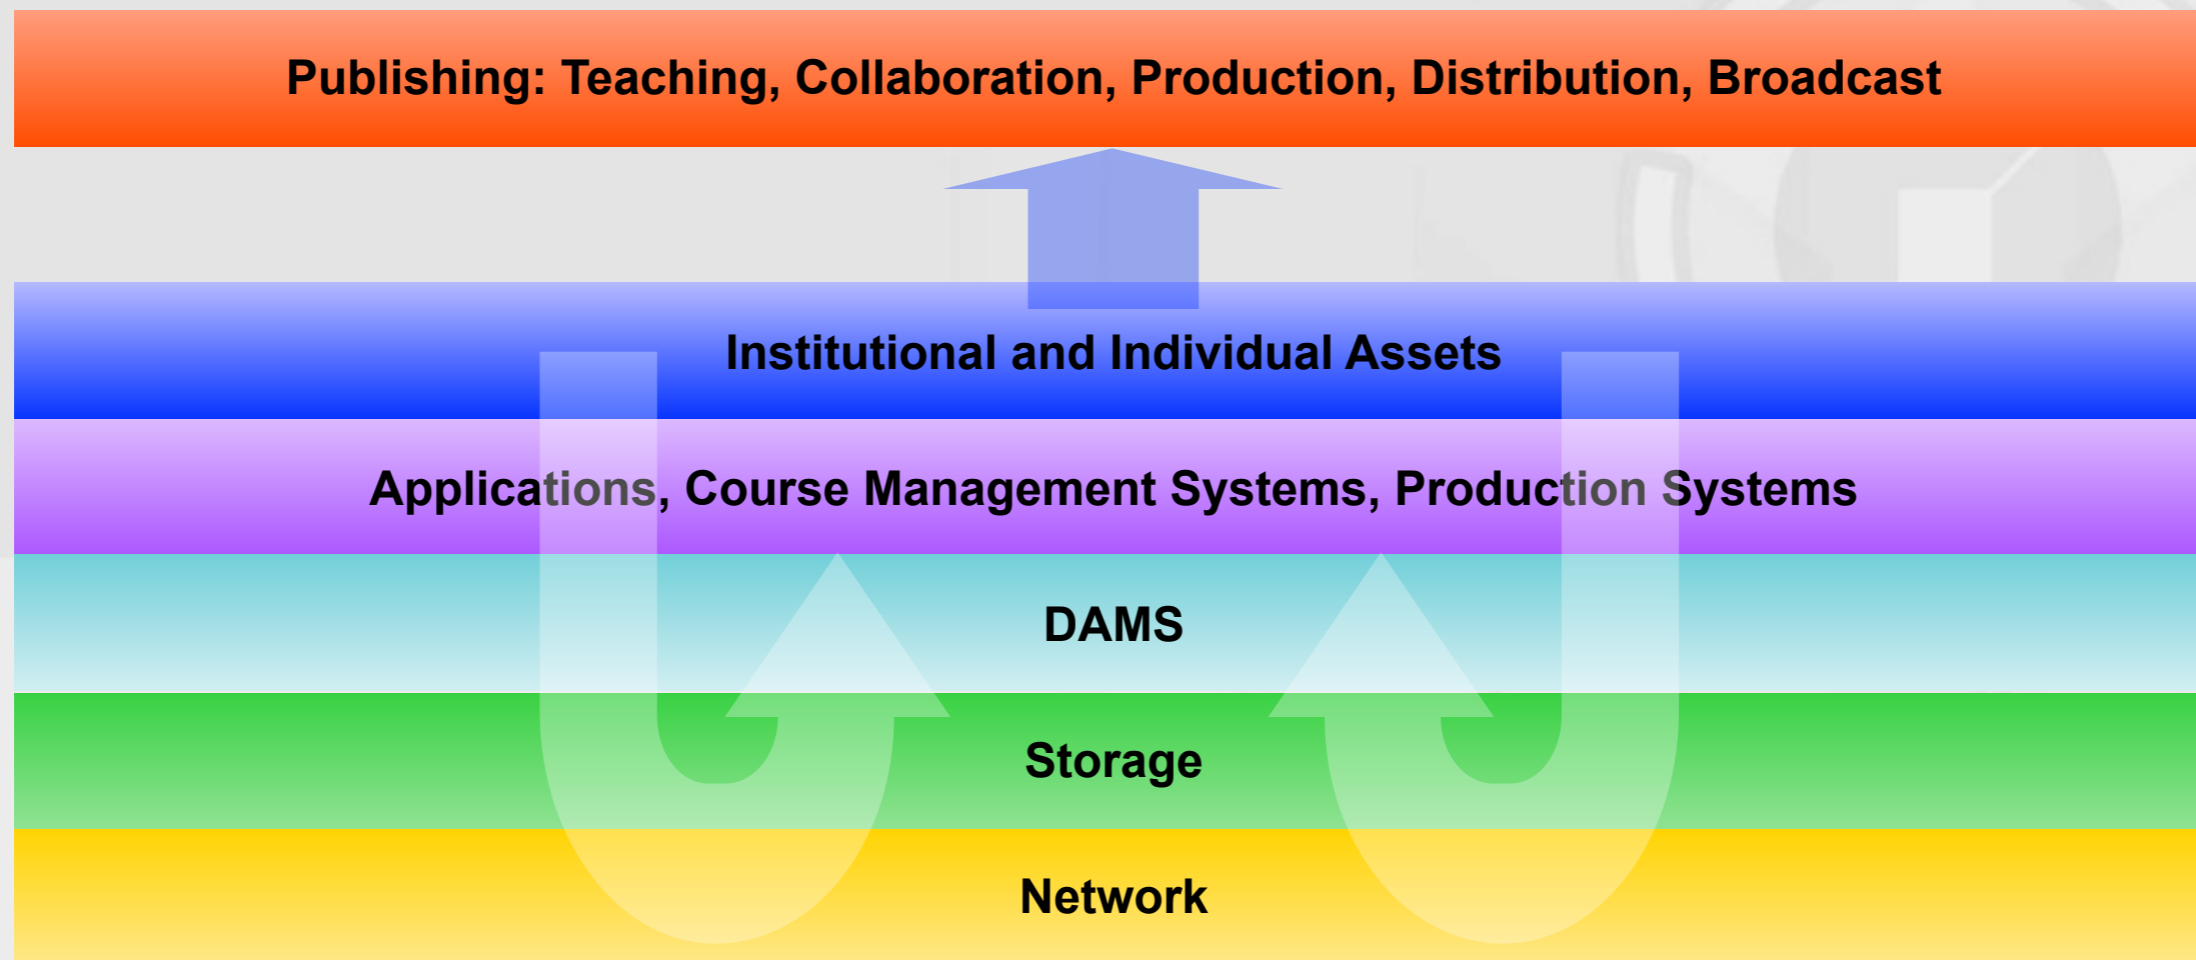

# Orientation of DAMS at the UM

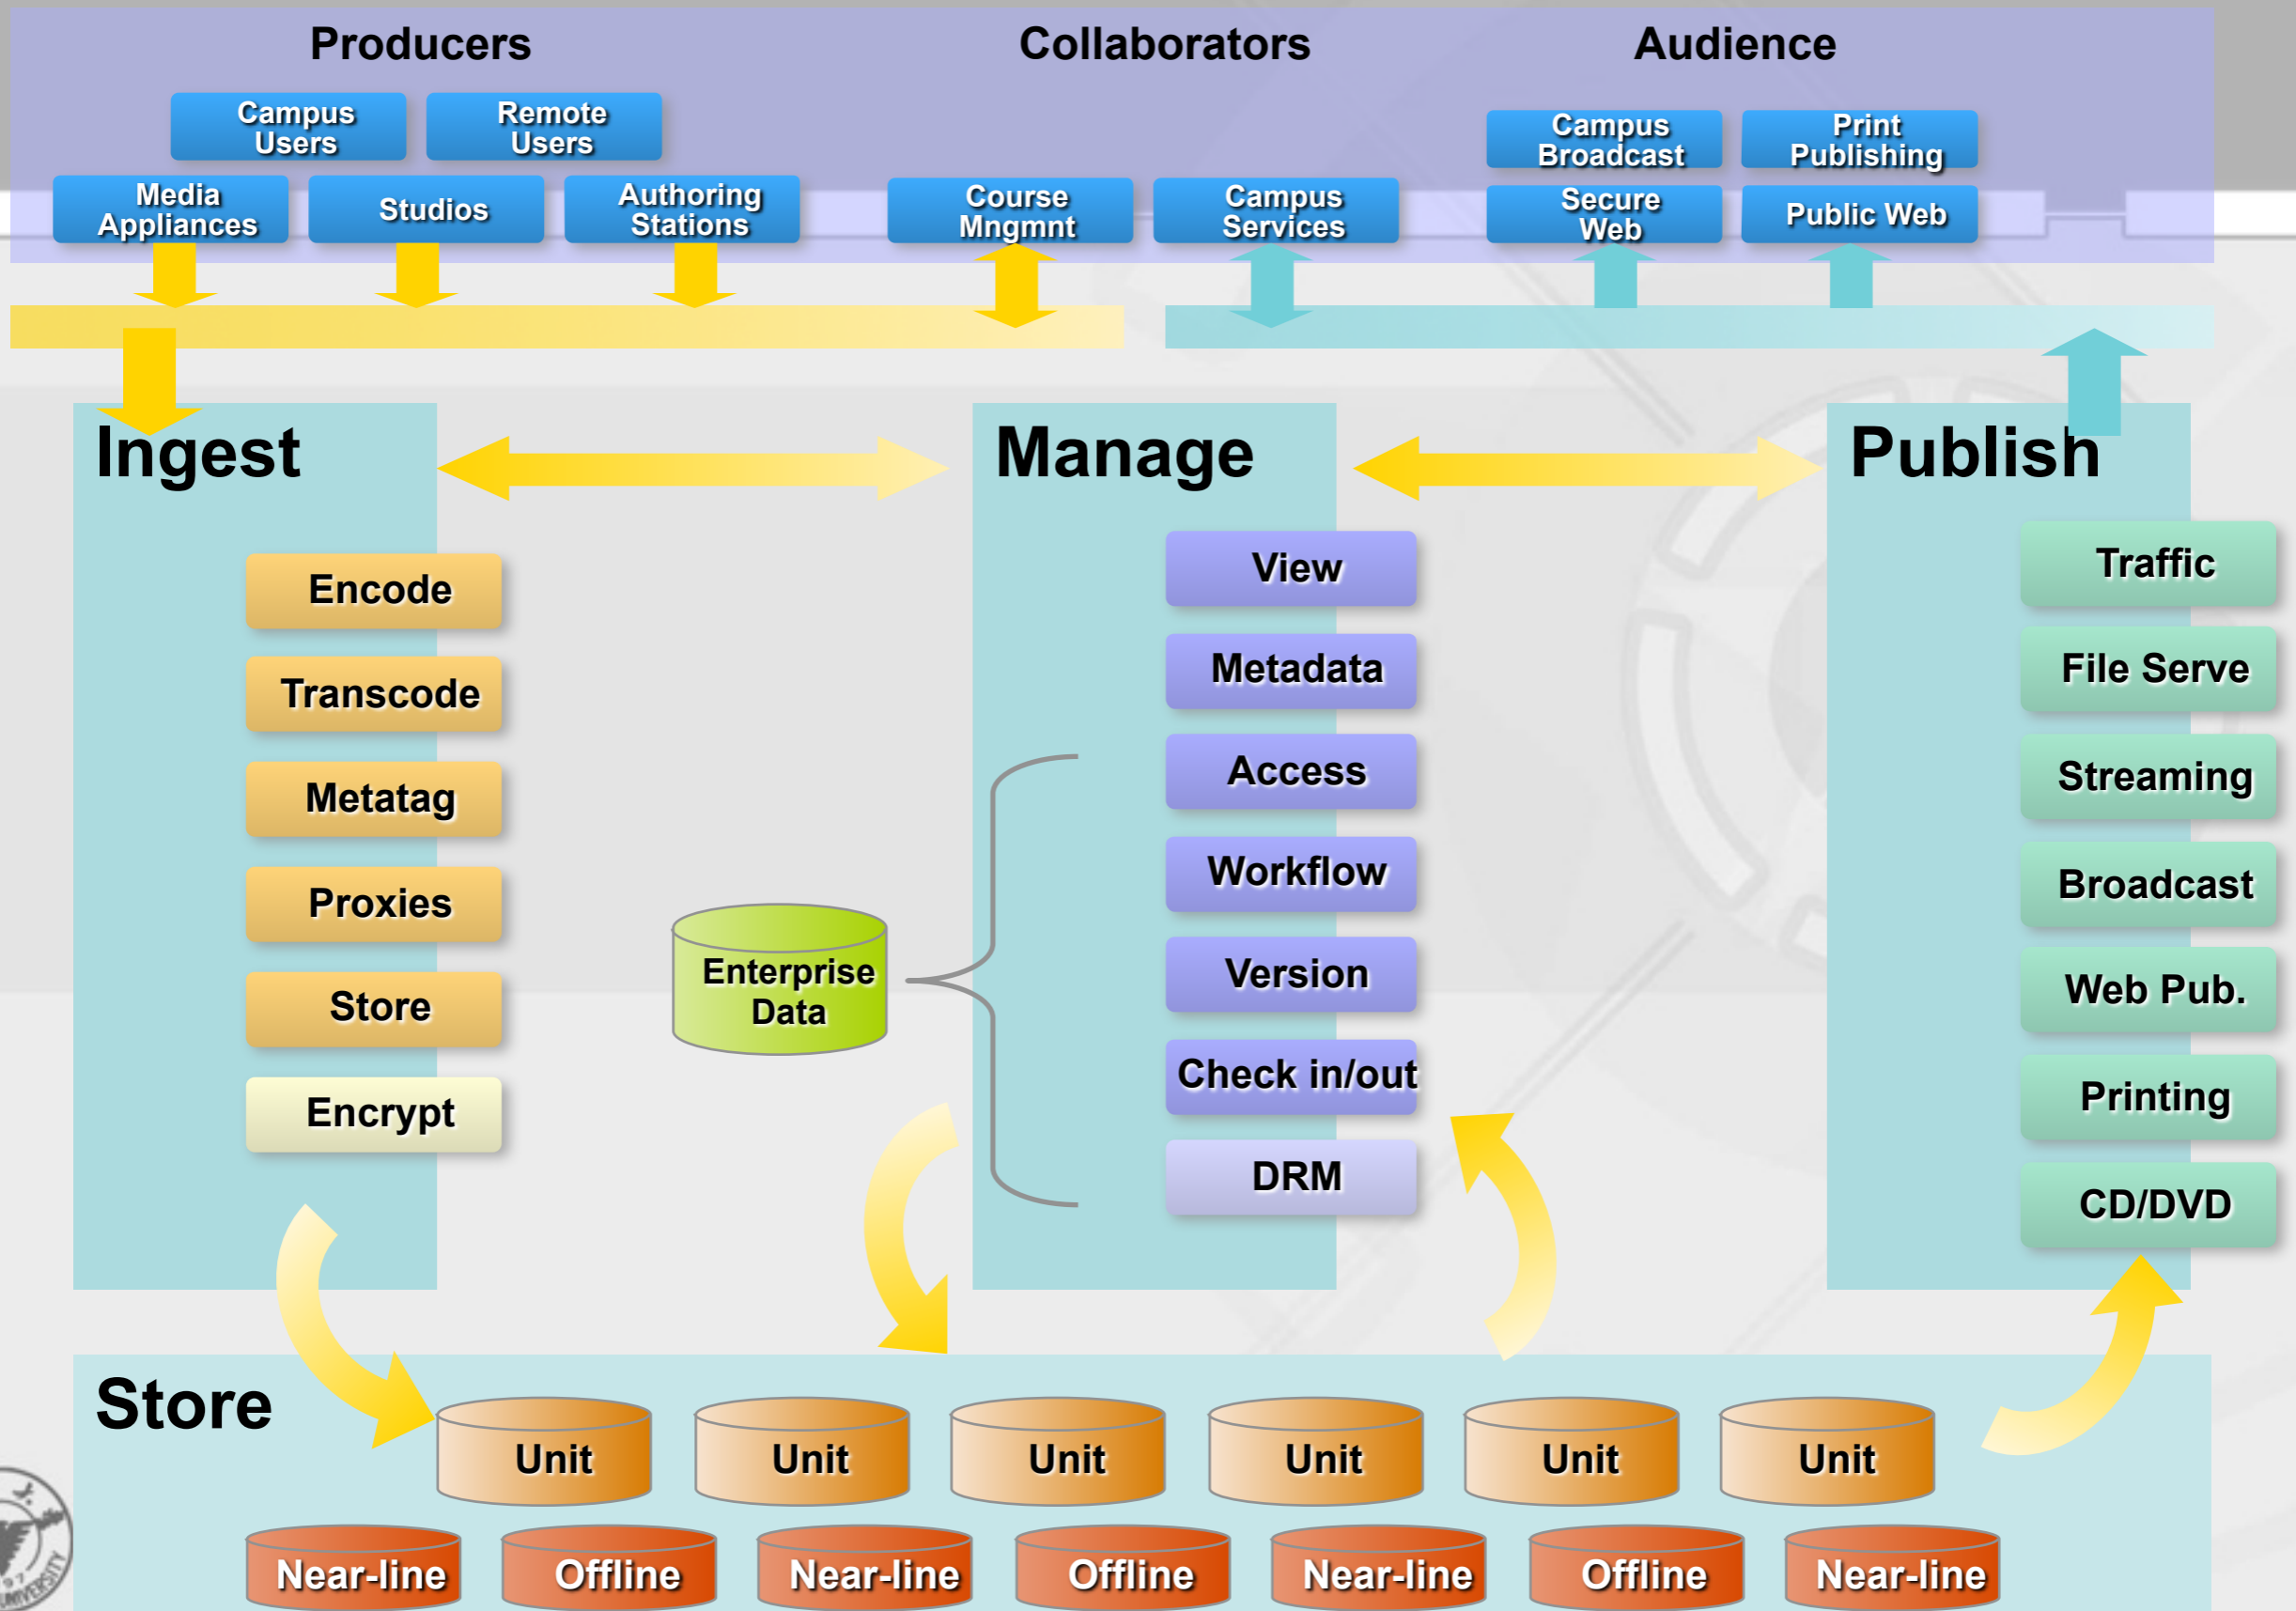

- Infrastructure level
- Tuned for rich media (time-based)
  - video
  - audio
  - 3D VR modeling and animation
- Capability for non time-based data (text, numerical data, still images)
- Metadata collection and management: automated or semi-automated
- Campus-wide availability
- Not primarily a content management tool nor production tool
- Coordinate with planned campus storage management practice
- Distributed management (authorization, roles, access lists)
- Integrated with centralized campus data services
- Plan for digital rights-declaration/management services

# What is the place of DAMS in the campus infrastructure?

# DAMS Component Services

# DAMS Living Lab Configuration
