Digital Asset Management

数字媒体资源管理

2. Introduction to Digital Media Format

任课老师：张宏鑫

2017-09-27

Outline

- Image format and coding methods
- Audio format and coding methods
- Video format and coding methods
- Introduction to HTML and XML
- Graphics format and coding methods

LZW Encode

"X X X D Z D D D Z D Z"

where the root values are X, D, Z. The following table follows the above [encoding algorithm](#), showing the values of P, S and P + S (the pattern added to the dictionary) at the end of each iteration of the while loop, as well as the dictionary that is built up:

P	S	P + S	Output	Dictionary	
				Code	Pattern
				0	X
				1	D
				2	Z
	X	X			
X	X	XX	0	3	XX
X	X	XX			
XX	D	XXD	3	4	XXD
D	Z	DZ	1	5	DZ
Z	D	ZD	2	6	ZD
D	D	DD	1	7	DD
D	D	DD			
DD	Z	DDZ	7	8	DDZ
Z	D	ZD			
ZD	Z	ZDZ	6	9	ZDZ
Z		Z	2		

So the final output is:

"0 3 1 2 1 7 6 2"

And the input has been compressed from 11 symbols down to 8.

LZW Decode

"0 3 1 2 1 7 6 2"

The following follows the [decoding algorithm](#), showing the necessary values for producing the decoded output:

P	C	LOOK_UP(P)	LOOK_UP(C)	Output	Dictionary	
					Code	Pattern
					0	X
					1	D
					2	Z
	0		X	X		
0	3	X	XX	XX	3	XX
3	1	XX	D	D	4	XXD
1	2	D	Z	Z	5	DZ
2	1	Z	D	D	6	ZD
1	7	D	DD	DD	7	DD
7	6	DD	ZD	ZD	8	DDZ
6	2	ZD	Z	Z	9	ZDZ

So the decoded output is:

"XXXDZDDZDZ"

The grey rows show the situation where LOOK_UP(C) is output as soon as it is added to the dictionary, and it is added to the dictionary as

LOOK_UP(P) + 1st character of LOOK_UP(P)

This situation occurs when the algorithm comes across a code for C that is not in the dictionary. It is then deduced entirely from P as above, added to the dictionary, and then output. This case is caused in the encoding when the encoder outputs a code just after it was added to the dictionary.

2.3. Video formats and coding methods

Representations of video

- Sequence of images ?!?
 - Can be viewed as a 3-dimensional matrix
 - But it is only 50% correct

Common video formats

- AVI (Microsoft, Divx, ...)
 - avi, wmv, asf
- RM (Realplayer)
 - rm, rmvb
- MOV (Quicktime)
 - mov
- MPEG
 - MPEG-1, MPEG-2, MPEG-4 ...

<http://www.bigbuckbunny.org/index.php/download/>

Video compression standards

- **MPEG standards**
 - Audio/Video compression, storage and play back standards
 - MPEG-1: VCD
 - MPEG-2: broadcast TV, e.g., DVD、 HDTV etc.
 - MPEG-3: replaced by MPEG-2
 - MPEG-4: network video transfer, stream media
 - MPEG-7:
 - MPEG-21:
- **ITU-T H.26x series**

MPEG-1 Standard ISO/IEC 11172-2 (1991)

"Coding of moving pictures and associated audio for digital storage media"

• Video

- optimized for bit rates around 1.5 Mbit/s
- originally optimized for SIF picture format,
- but not limited to it:
 - [**NTSC based**] : 352x240 pixels at 30 frames/sec
 - [**PAL based**] : 352x288 pixels at 25 frames/sec
- progressive frames only
 - no direct provision for interlaced video applications, such as broadcast television

MPEG-2 Standard ISO/IEC 13818-2 (1994)

- Video

- 2-15 or 16-80 Mbit/s bit rate (target bit rate: 4...9 Mbit/sec)

- TV and HDTV picture formats

- Supports interlaced material

- MPEG-2 consists of *profiles* (类) and *levels* (级)

- Main Profile, Main Level (MP@ML)

- 720x480 resolution video at 30 frames/sec

- < 15 Mbit/sec (typical ~4 Mbit/sec)

- for NTSC video

- Main Profile, High Level (MP@HL)

- 1920x1152 resolution video at 30 frames/sec

- < 80 Mbit/sec (typical ~15 Mbit/sec)

- HDTV

MPEG-1 v.s. MPEG-2

- MPEG-1 Apps ~

- CD-I, digital multimedia,
- video database, e.g. video-on-demand

- MPEG-2 Apps ~

- satellite, cable, and terrestrial broadcasting,
- digital networks, and
- digital VCR

MPEG compression is based on 8 x 8 pixel **block processing**

8 pixels

8 pixels

- 8 x 8 pixel block can be numerically manipulated by fast signal processor in real time
- Motion estimation is based on comparing the blocks between series of pictures

MPEG: only compress moving parts

new picture

previous picture

difference

Encoder

Decoder

difference

previous picture

new picture

MPEG: motion compression

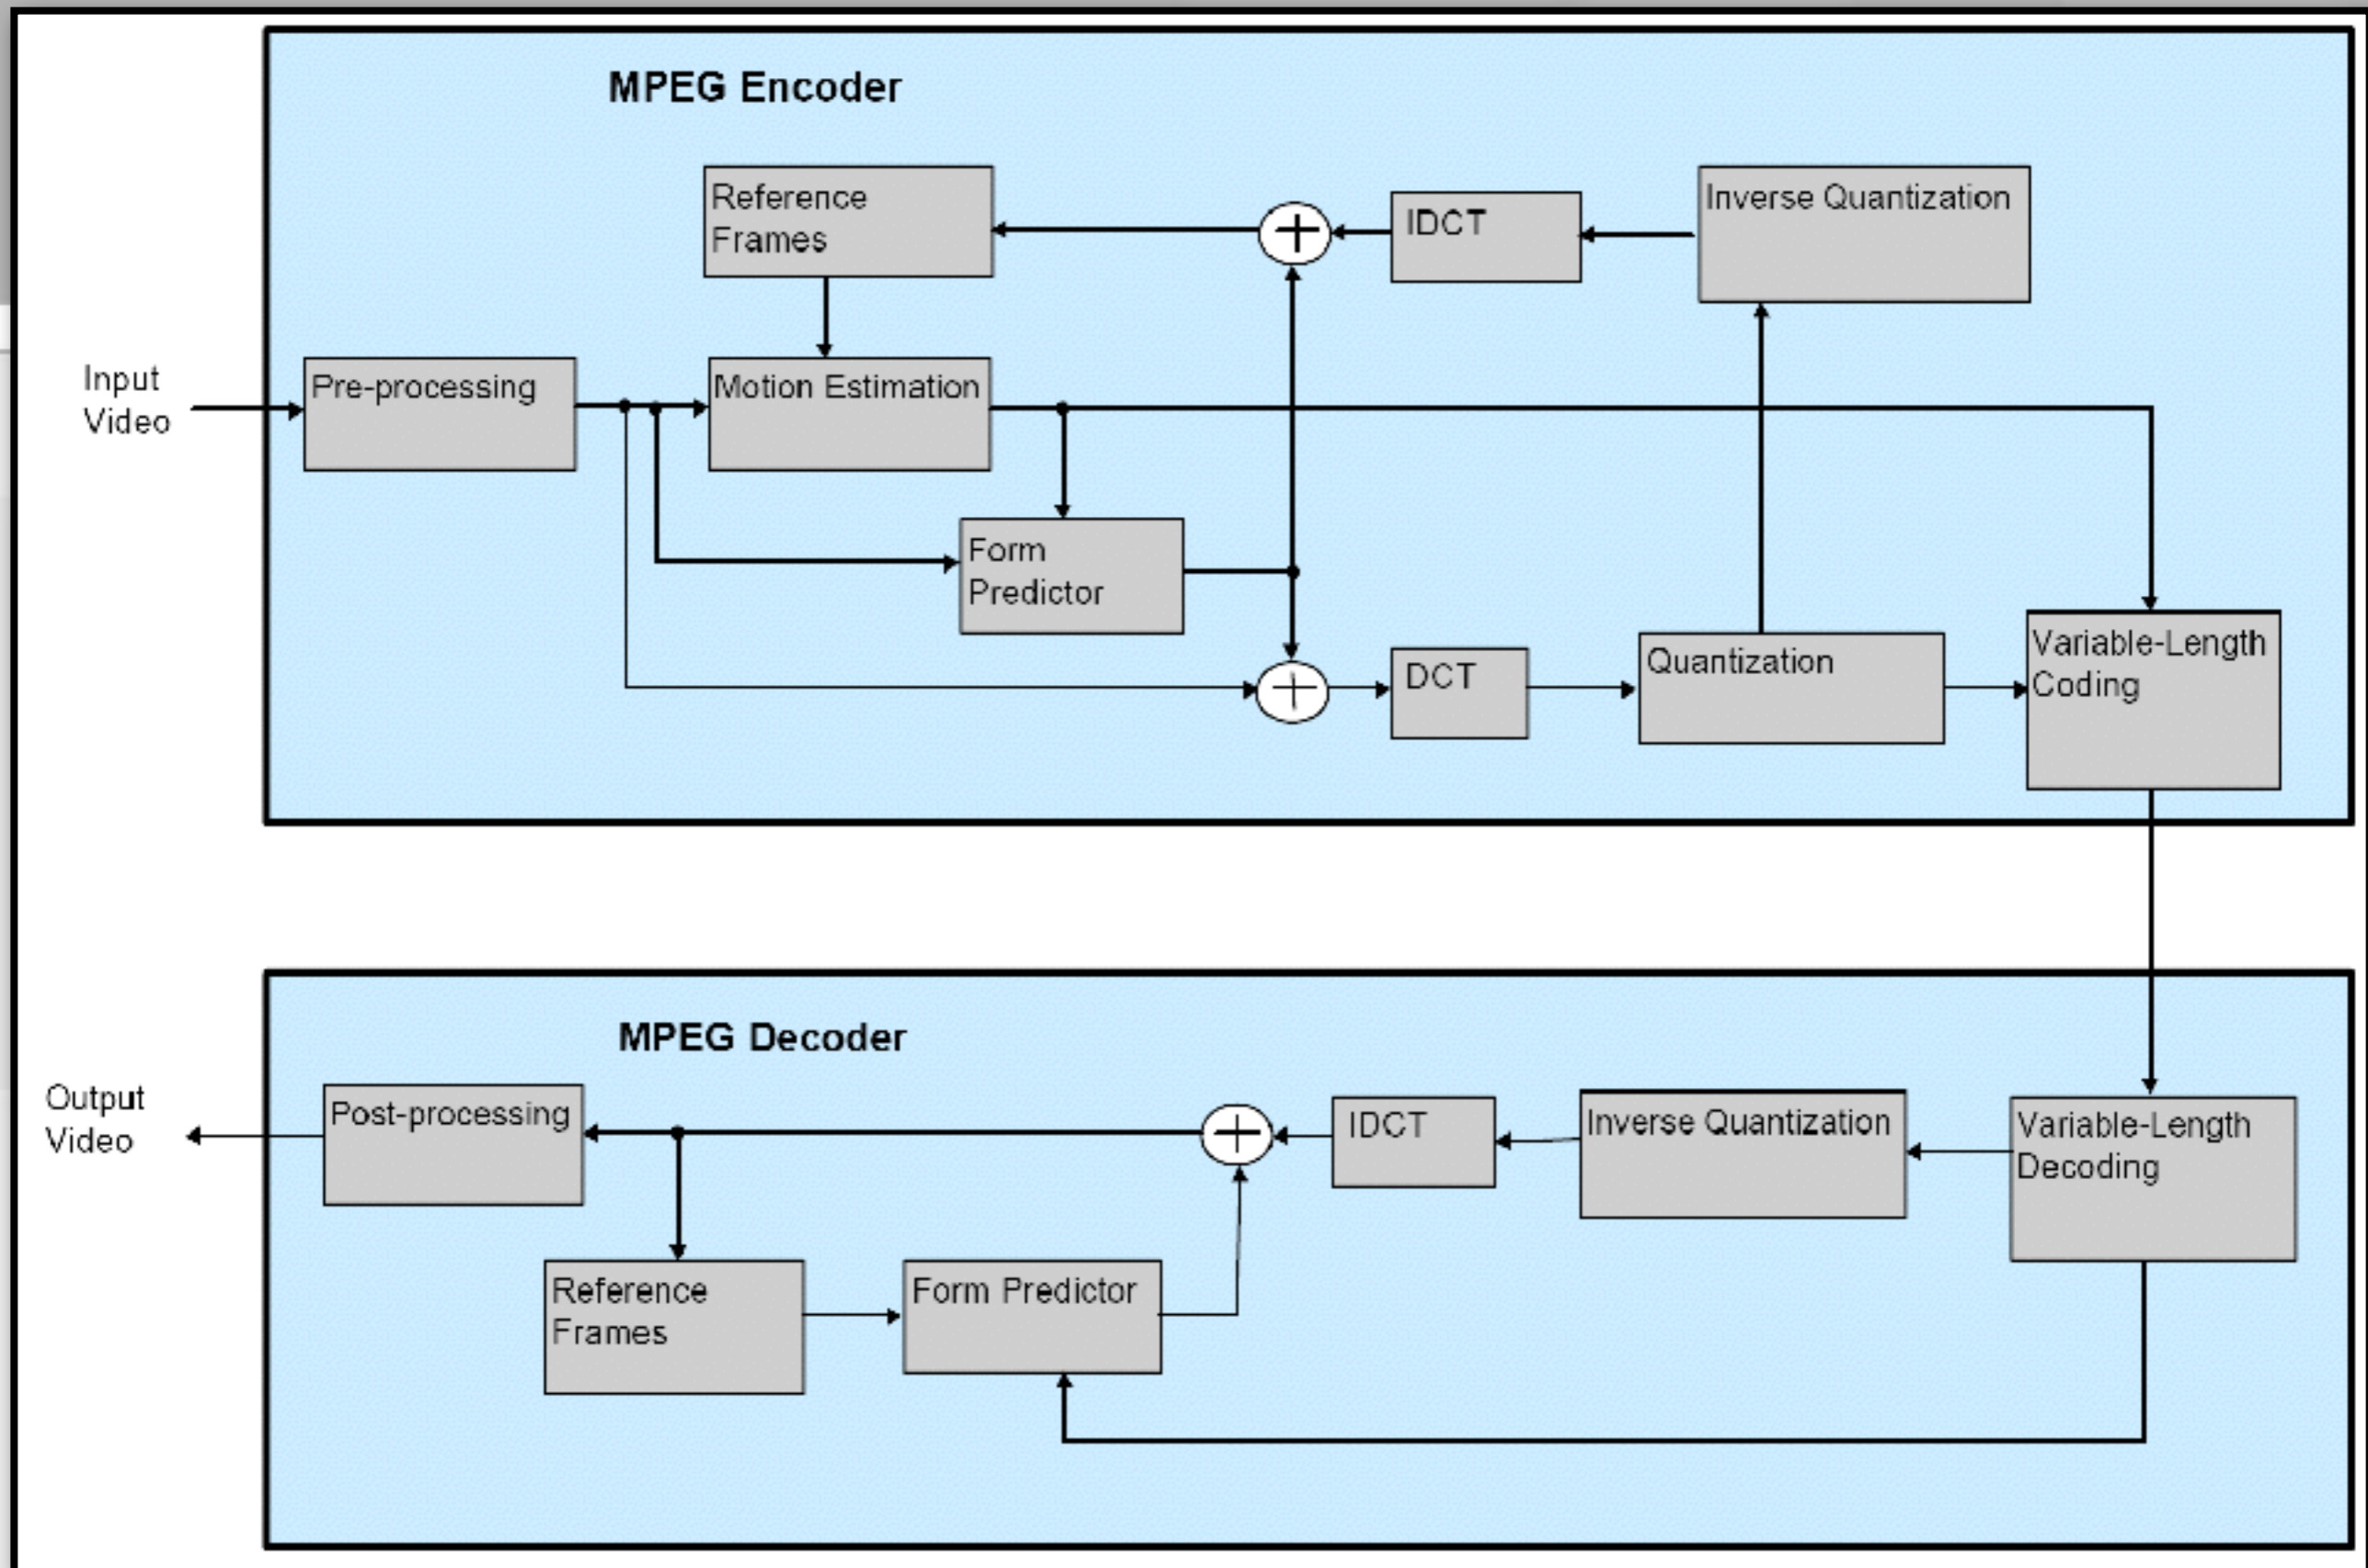

I = Intra-Frame
P = Predicted frame
B = Bi-directionally
interpolated frame

Video signal: stream of picture, it is not necessary to send every picture

- Whole picture is needed only when all the content is changed!
- Several pictures has to be buffered to memory to make prediction forward and backward

MPEG: other issues

- Motion compensating
- Intra-frame transfer order

Color video coding

- 抽样和编码整个模拟（彩色）视频信号
 - 例如，复合编码
- 对亮度和色度分别编码
 - 例如，组件编码
 - 亮度比色度更重要，可根据应用场合采用4:2:2, 4:2:0, 4:4:4等不同的编码比率

YUV 420等格式的说明

- YUV 的优点是色度通道的采样率可比 Y 亮度通道的低，同时不会明显降低视觉质量
- A:B:C表示法可用来描述 YUV 的采样频率比例
 - 4:4:4 每像素32位 表示色度频道没有下采样
 - 4:2:2 每像素16位 表示 2:1 的水平下采样，没有垂直下采样。对于每两个 U 样例或 V 样例，每个扫描行都包含四个 Y 样例
 - 4:2:0 每像素16位或12位 表示 2:1 的水平下采样，2:1 的垂直下采样
 - 4:1:1 表示 4:1 的水平下采样，没有垂直下采样。对于每个 U 样例或 V 样例，每个扫描行都包含四个 Y 样例，不太常用

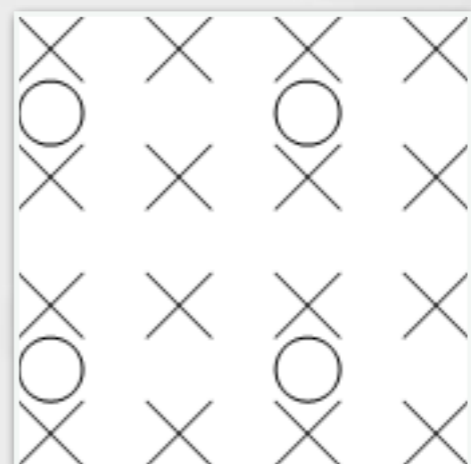

YUV444

YUV422

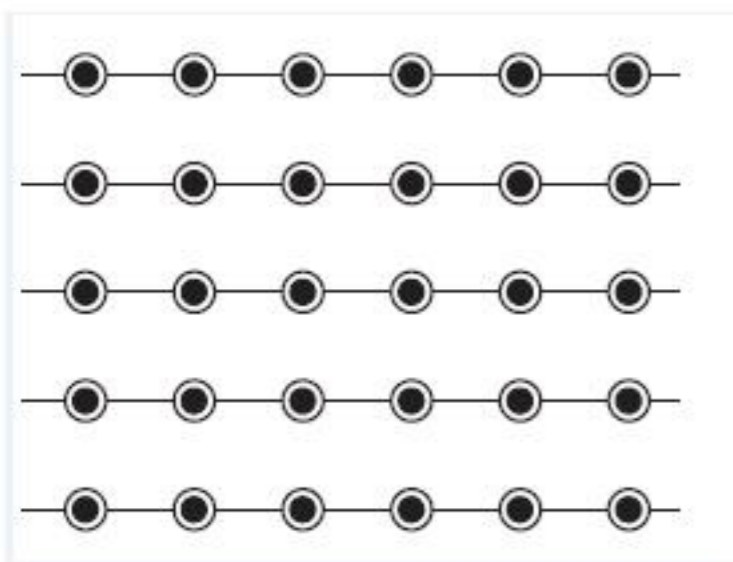

YUV420
MPEG-1

YUV420
MPEG-2

YUV4:4:4 采样

YUV4:2:2 采样

YUV4:2:0 采样

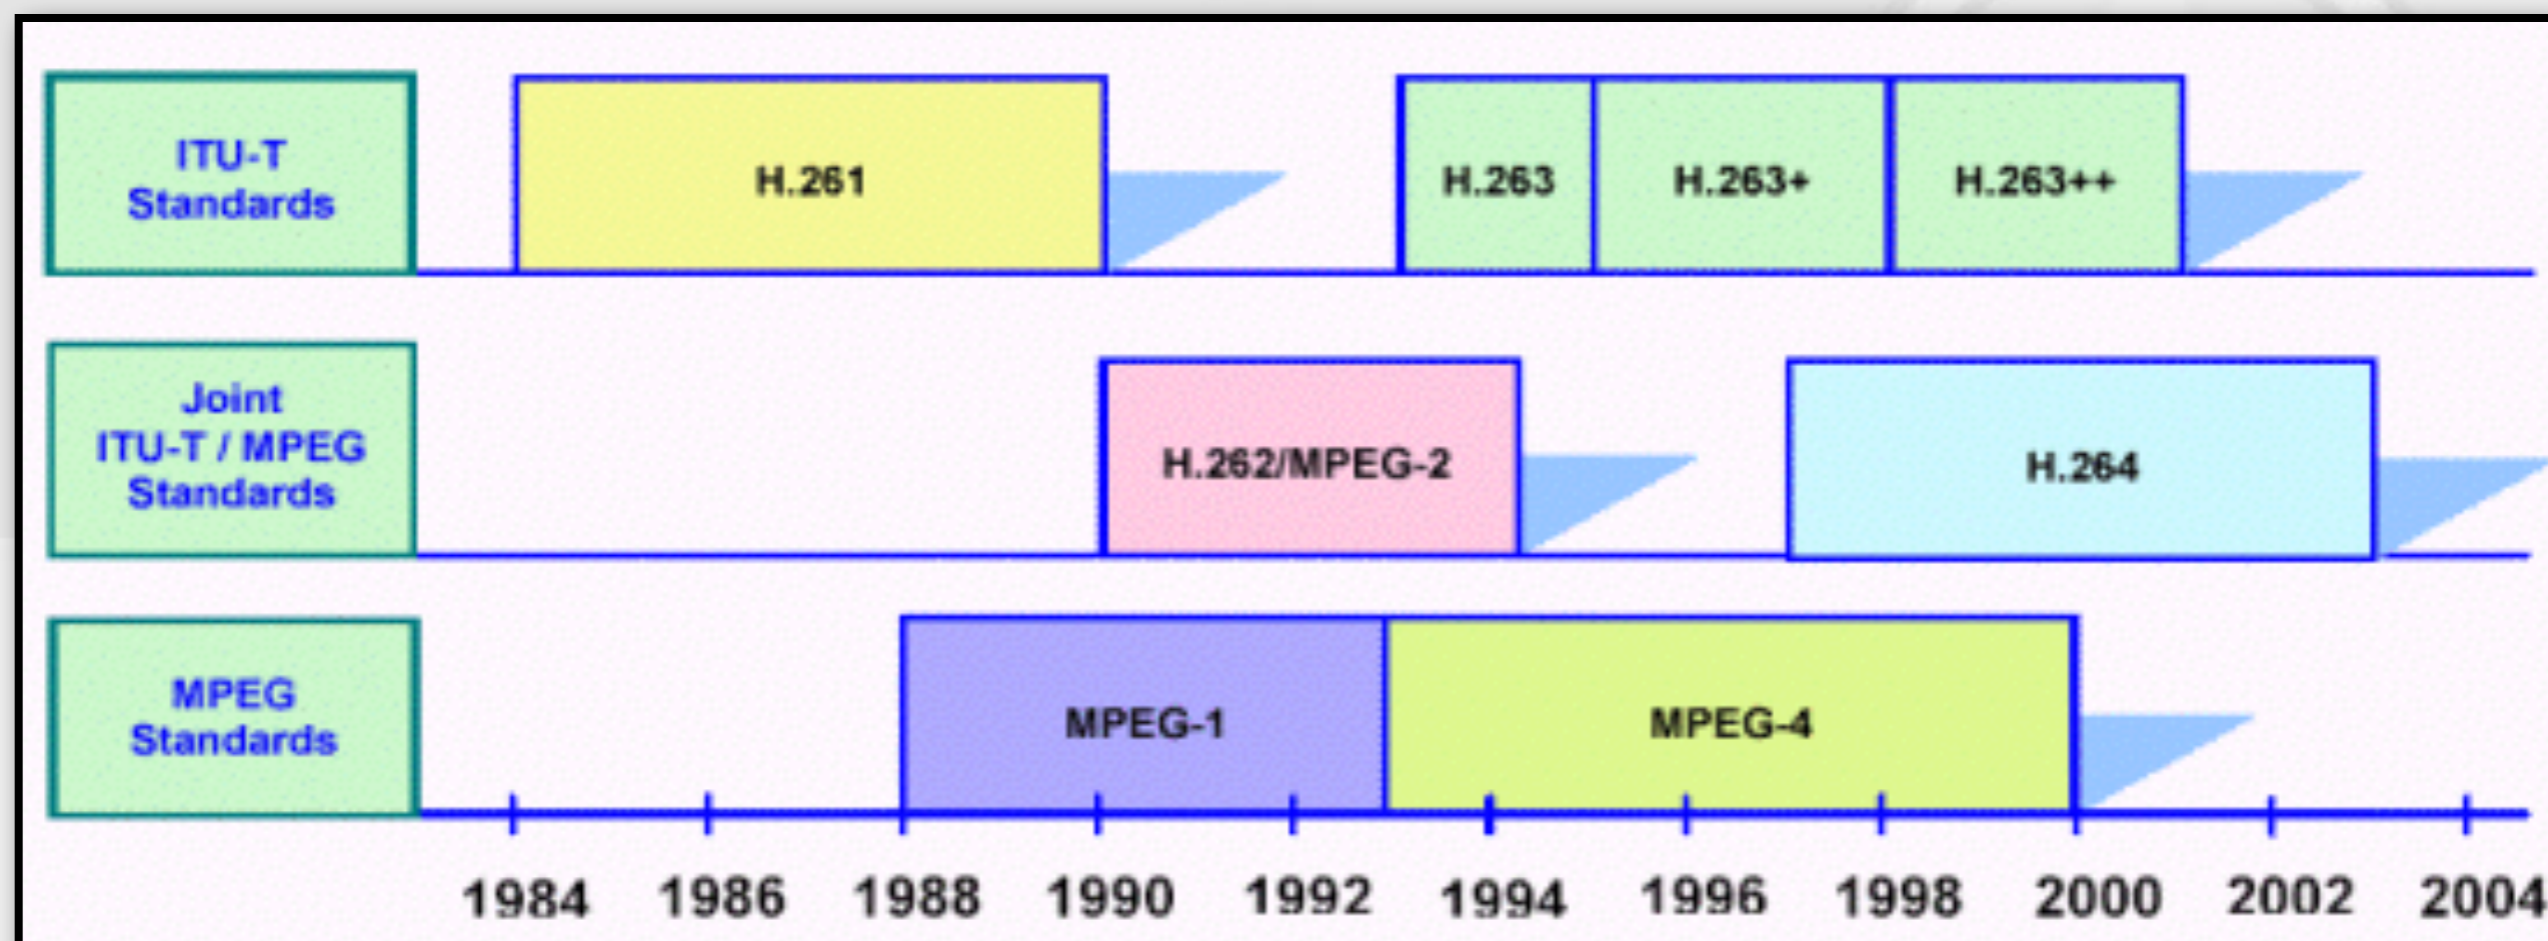

黑点表示采样该像素点的Y分量，以空心圆圈表示采用该像素点的UV分量

Overview of H.264

- JVT (Joint Video Team)
 - founded on December 2001, Pattaya Thailand.
 - video coding specialists from ITU-T and ISO, the two international standards organizations
 - goal**: define a new video coding standards to achieve high compression rate, high image quality, good network adaptive coding frame.
- H.264: A new video compression standard
 - accepted by ITU-T
 - accepted by ISO
 - called AVC (Advanced Video Coding) standard
 - as the 10th part of MPEG-4

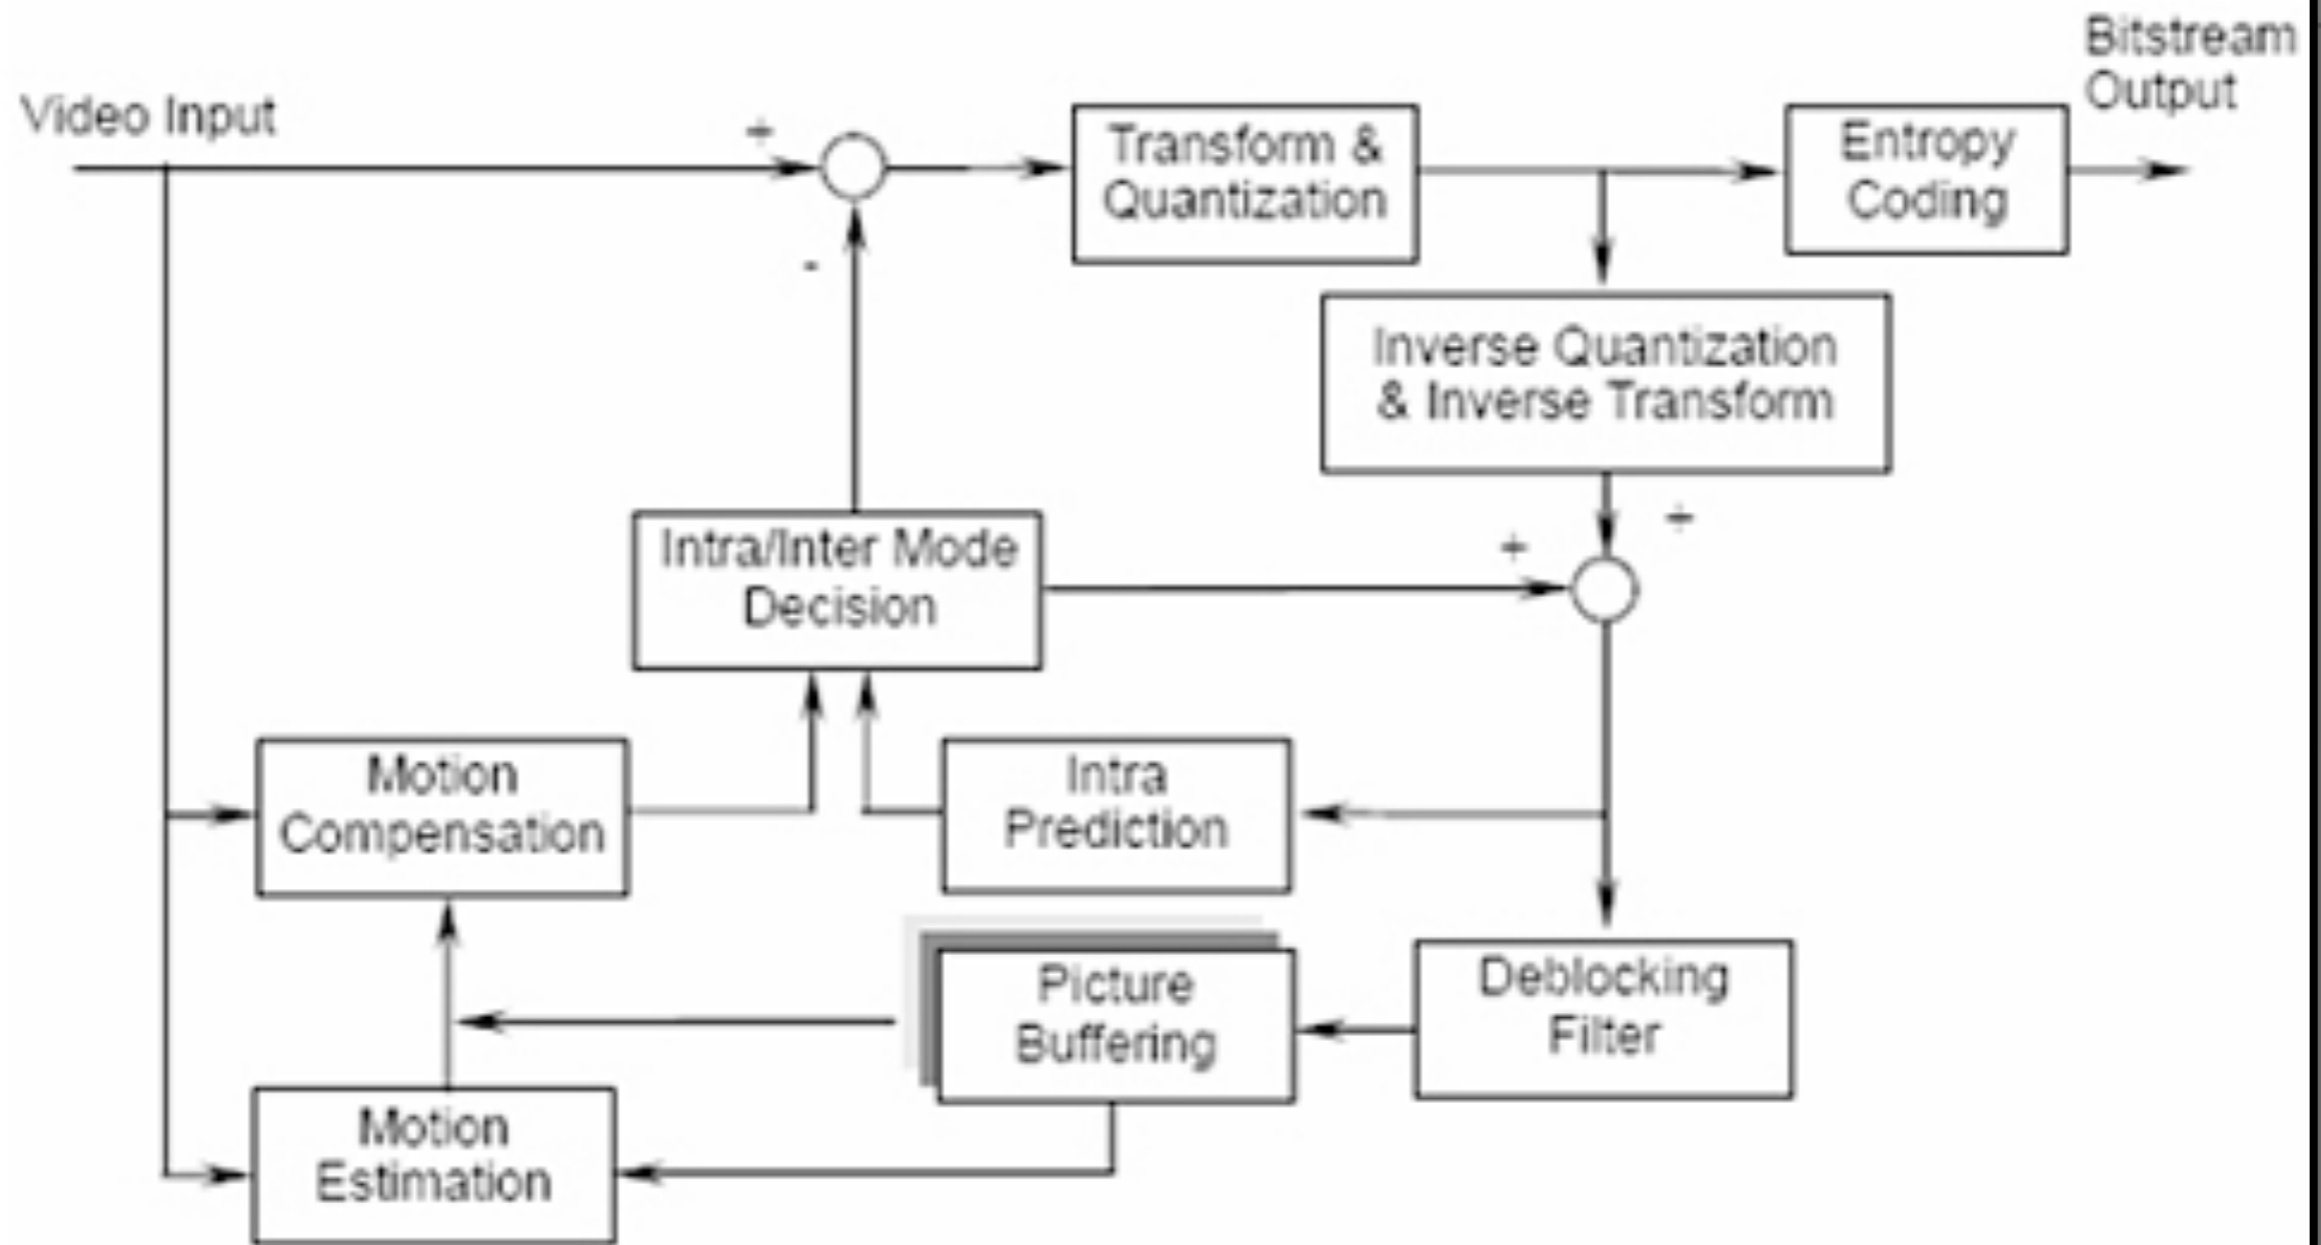

Major history of digital video standard

H.264 coding principle

ASTRI H.264 Baseline Profile Encoder Function Diagram

H.264的主要技术特点

1. 4类DCT整数变换以及相应的量化方法
2. 7种宏块预测模式
 - 16×16 , 16×8 , 8×16 , 8×8 , 8×4 , 4×8 , 4×4
 - 运动估计和补偿更加精确
3. 多参考帧
4. 帧内预测
5. 改进的去块效应滤波器 (Deblocking filter)
6. 增强的熵编码方法
 - UVLC (Universal VLC)、CAVLC (Context adaptive VLC) 和CABAC
7. $1/4$ 像素插值
8. 宏块级逐行、隔行自适应编码MBAFF

Advantages and shortages of H.264

High compression rate

- In the same image quality, H.264 can be compressed as size of
 - 36% of MPEG-2, 61% of MPEG-4 , 51% of H.263
- Low bit stream, high quality

High error correctness rate

- H.264 provides necessary tools to solve the error coding problem in unstable network environments

Network adaptation

- H.264 provides Network Adaptation Layer so as to make files of H.264c can be easily transferred in different network environments.

High computation price

- In the same image quality, H.264 is twice of MPEG-2 in computation complexity.

Applications of H.264

- H.264 standards added a NAL (Network Abstraction Layer)
 - to face the network connection and interface problem in the real applications.
- **video communication**
 - In real-time communication, POLYCOM、TANDBERG、VCON、SONY etc. claimed their own H.264 based TV-meeting products.
- **digital TV broadcasting**
 - MPEG has already finished defining the MPEG-2 compatible standard on H.264 stream coding content
- **video storage-and-play-back**
 - For High resolution DVD (HD DVD) application, H.264/MPEG-4 AVC solution.

H.265

- High Efficiency Video Coding (HEVC), also known as H.265 and MPEG-H Part 2
- 应用于：
 - 高清晰度(Higher Definition): 数字视频的应用格式从720 P向1080 P全面升级, 在一些视频应用领域甚至出现了4K x 2K、8K x 4K的数字视频格式;
 - 高帧率(Higher frame rate): 数字视频帧率从30 fps向60fps、120fps甚至240fps的应用场景升级;
 - 高压缩率(Higher Compression rate): 传输带宽和存储空间一直是视频应用中最为关键的资源, 因此, 在有限的空间和管道中获得最佳的视频体验一直是用户的不懈追求。

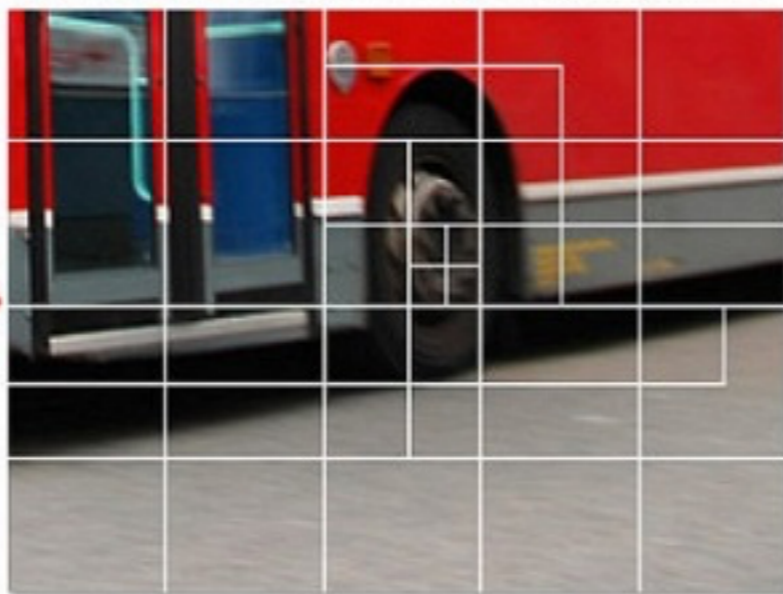

H.265

[Conventional compression format]

[Newly developed compression format]

H.264(JM 16.2), 4112kbps, 33.19dB HEVC(HM3.0), 1927kbps, 33.14dB

Summary of video coding

- Resolution
- Coding rate
- Motion coding
- Transfer performance

VR + image/video/audio

- Image
 - stereo ~
 - 360 Panorama
 - 360 + stereo
- Video
 - stereo ~
 - 360 Panorama
 - 360 + stereo
- Audio
 - stereo
 - surrounded ~

车猫网 360度立体视频

2.4. HTML and XML

结构化文档概览

Overview of HTML

- Hypertext Markup Language
 - Developed by **Tim Berners-Lee**
 - **lightweight** markup language vs. complex **SGML**.
 - Based on pure text format
- Rich abilities to display multimedia information.
 - Later added tags to support image and videos.
- HTML **3.2** => HTML **4.0** => HTML **5.0**
 - Different browser has their own display effects.

Overview of all HTML elements

  #homefooter { margin: 60px auto 50px; }
  ...
  </style>
</head>
```

- **TITLE** - Document title
- **ISINDEX** - Primitive search
- **META** - Meta-information

- **LINK** - Site structure
- **BASE** - Document location
- **SCRIPT** - Inline script
- **STYLE** - Style information

Overview of HTML - Body elements

```
<html>
<head> ... </head>
<body>
  <H1> Hello, world </H1>
  <P> Digital Asset management is cool! </P>

</body>
</html>
```

- **Block level elements**

- Headings: H1 => H6

- Lists: UL, OL, DIR, MENU, LI, DL, DT, DD

- Text Containers: P, PRE, BLOCKQUOTE, ADDRESS

- others: DIV, CENTER, FORM, HR, TABLE

Overview of HTML - Body elements

```
<html>
<head> ... </head>
<body>
  <H1> Text-level elements </H1>
  <A href="http://www.google.com"> GOOGLE <IMG src=" ... "> </A>

</body>
</html>
```

- **Text-level elements**

- Logical markup: **EM ...**
- Special markup: **A, IMG, APPLET ...**
- Physical markup: **B, ...**
- Forms: **INPUT ...**
- Tables: **CAPTION, TR, TH, TD**

About CSS

叠样式表 (Cascading Style Sheets)

- http://www.w3school.com.cn/css/css_intro.asp
- 样式定义如何显示 HTML 元素
- 样式通常存储在样式表中 (*.css)
- 把样式添加到 HTML 4.0 中，是为了解决内容与表现分离的问题
- 外部样式表可以极大提高工作效率
- 外部样式表通常存储在 CSS 文件中
- 多个样式定义可层叠为一个

HTML 5.0

- 学习参考: <http://www.w3school.com.cn/html5/index.asp>
- 实例解释: <http://directguo.com/html5>
 - <http://html5-slide-template.googlecode.com/svn/trunk/html5-slide-template.html#slide1>
- 一套Web富客户端开发的工业标准
 - 许多新特性: 内建的视频、音频标记, 元素拖放功能
 - 最新的 Safari、Chrome、Firefox 以及 Opera 支持某些 HTML5 特性, Internet Explorer 也已经逐步支持

Interesting demos
